

ALL PROJECTS. ONE TOOL. CLARITY AT LAST.

 **TPG ProjectPowerPack: For all your next generation Project Management needs.**

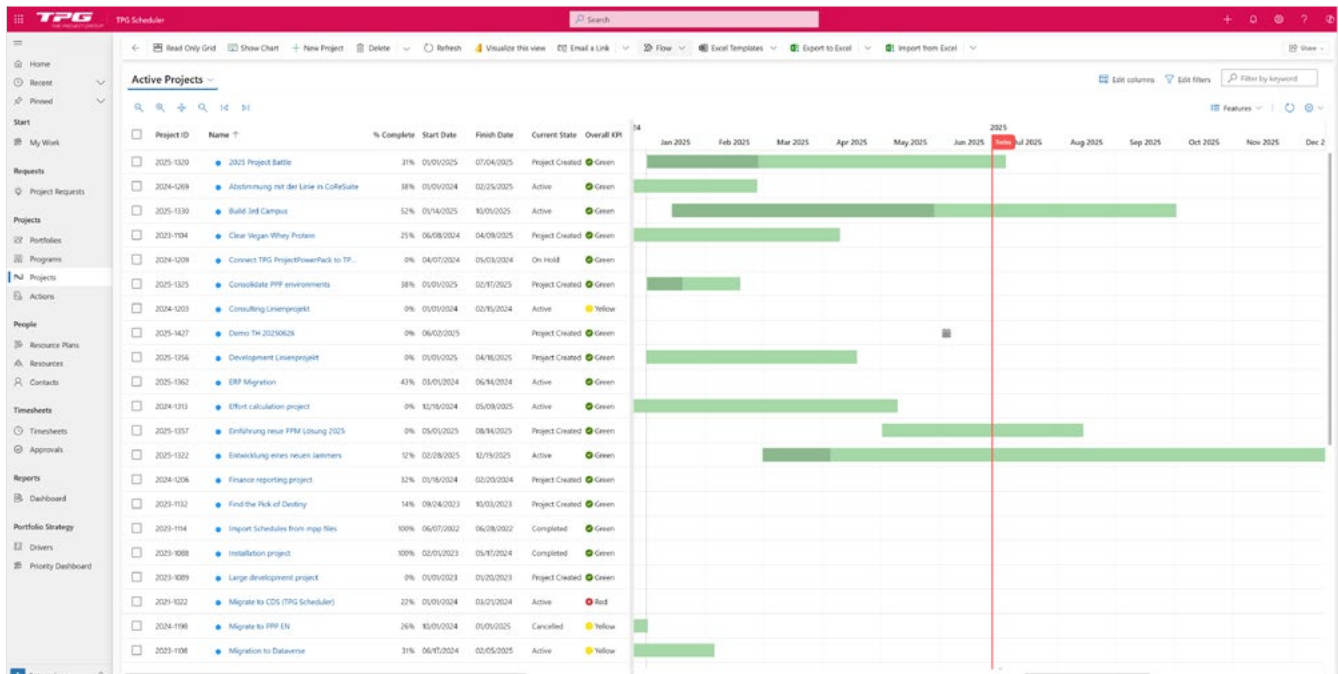

Unclear about your resource utilisation? Tired of constantly chasing down information and juggling Excel or Smartsheets? Then it's time to discover TPG ProjectPowerPack and regain full control over your projects and resources. TPG's next-generation project management software delivers integrated project and portfolio management (PPM) – within your Microsoft 365 environment.

UNIFIED DATA FOR CONFIDENT DECISION-MAKING

TPG ProjectPowerPack brings all your project information together in one place, helping you and your teams reduce the number of separate tools you rely on. By working in a single, consistent environment, you avoid the inefficiencies of switching between apps and ensure everyone has access to the same reliable information. The result: better decisions, improved coordination, and stronger delivery across your projects.

The solution comes with a complete set of proven best practices for managing projects, portfolios, resources, and tasks. It integrates flexibly with your scheduling tool of choice – whether that's Microsoft Planner (formerly Project for the web), TPG Scheduler, or Microsoft Project Online.

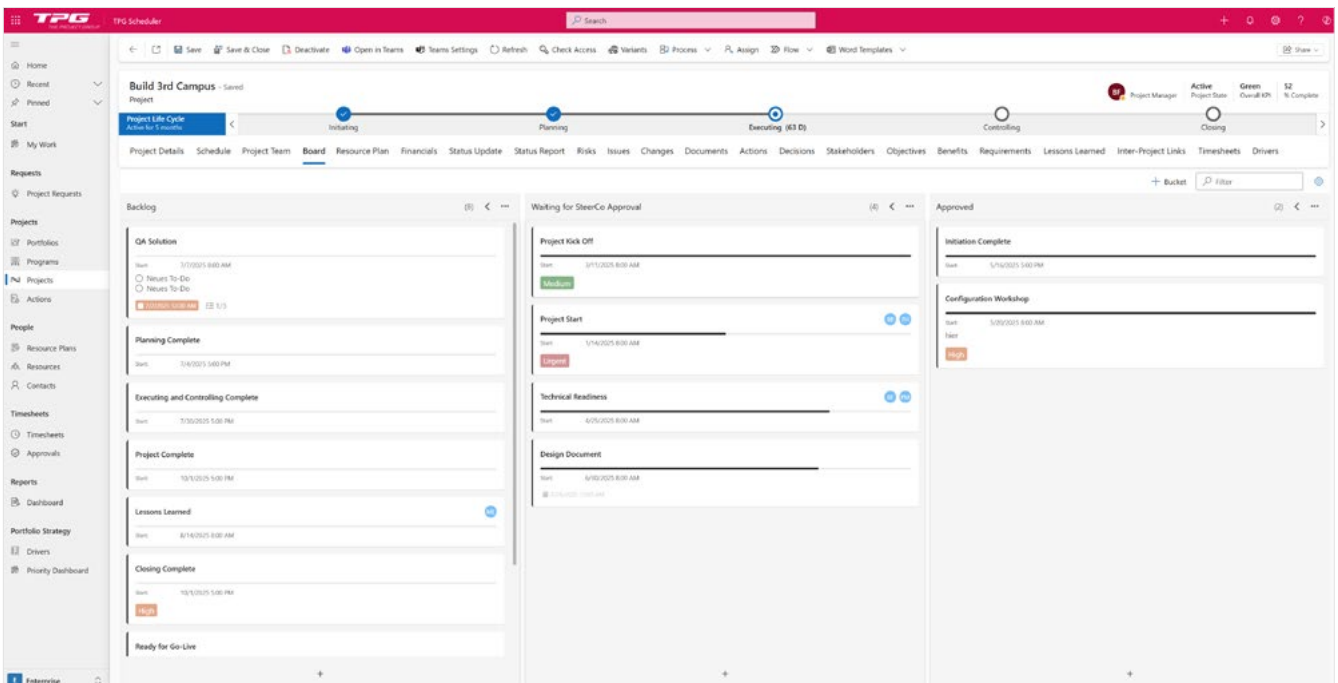

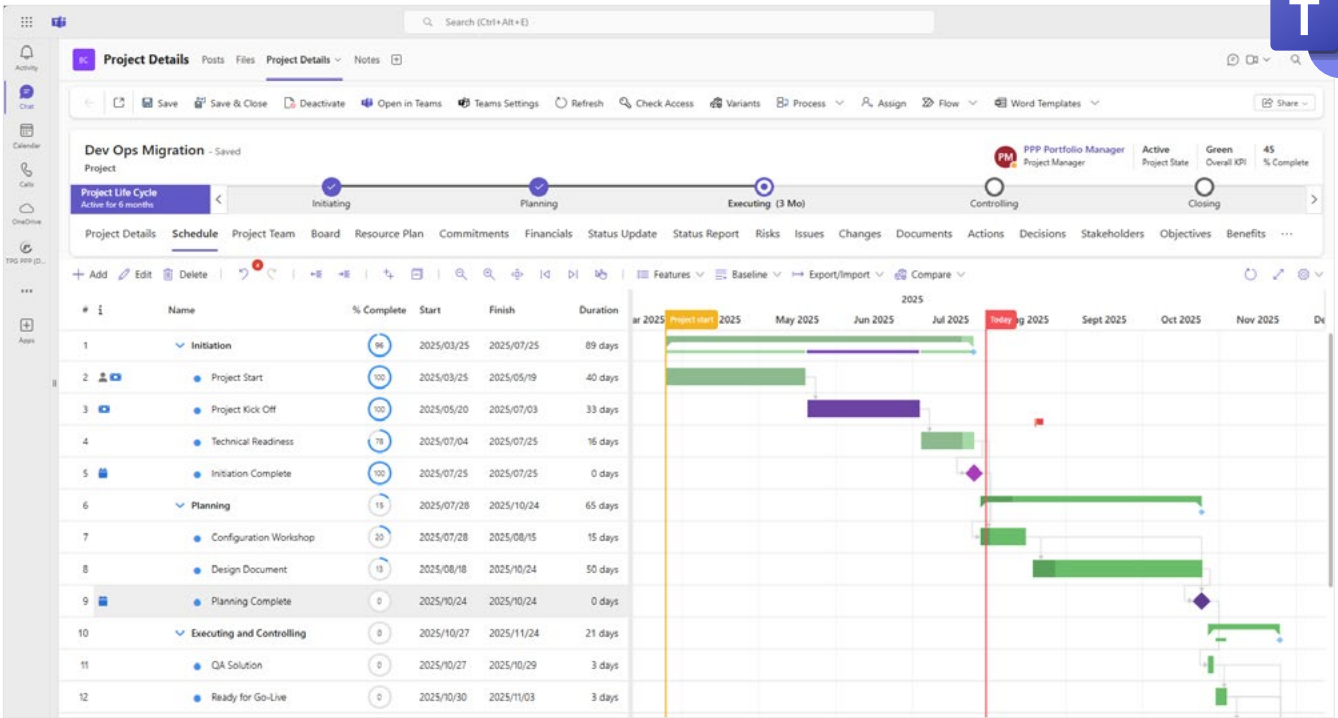

WHY TPG PROJECTPOWERPACK?

- » **Boost Efficiency:** Streamline collaboration with Microsoft Teams integration
- » **Stay Informed:** Access all your project data from one centralised source
- » **Decide Faster:** One-click reports for quick, data-driven decisions
- » **Work Consistently:** Apply best practices for reliable and repeatable results
- » **Plan Smarter:** Build on a strong foundation with AI-powered insights

TECHNOLOGY EXPERTISE BUILT ON REAL-WORLD INSIGHT

TPG ProjectPowerPack is the result of 27 years of TPG's deep project management expertise, delivering a powerful solution built on the Microsoft Power Platform. It brings together Power Apps, Power Automate, Power BI, Data-verse, and Copilot – all integrated within Microsoft Teams for practical, day-to-day use.

THE ONLY PPM APP YOU'LL NEED

Built on the flexible Microsoft Power Platform, TPG ProjectPowerPack grows with your organisation. Its low-code/no-code foundation makes it easy to extend, configure, and customise. Your data remains secure within your Microsoft 365 environment – always available, exportable, and ready for AI-driven insights. A future-ready solution for modern project management.

THE APP FOR FUTURE-READY PROJECT TEAMS

Your Challenges

- » Using multiple tools makes managing projects harder.
- » Without a central, reliable data source, it's harder to make decisions.
- » Manual reporting takes time and often lacks accuracy.
- » Tools that are hard to use end up being ignored.
- » When systems don't talk to each other, your data becomes outdated and unreliable.
- » Rigid tools make it difficult to adapt when your business changes.
- » You can't see how changes in one project affect others.
- » Misaligned task planning between leads and teams creates confusion.
- » Without a full view of team availability, some people end up overloaded while others are underused.
- » Locked-in systems make it hard to share or move data.

The TPG ProjectPowerPack Advantage

- » **One platform for all your projects:** Plan, track and manage everything from one place – from tasks to workflows to files to time tracking – tailored to the way you deliver projects.
- » **Everything in one place with Microsoft 365:** All your key project data lives in your Microsoft environment – always up to date, easy to access, and ready to support better decisions with insights from tools including Copilot.
- » **Clear reports, instantly:** Over 40 pre-built reports give you up to date views of project health, resource use and portfolio performance – powered by KPIs with options to connect with data from other applications.
- » **Built with users in mind:** A clean, modern interface and integration with Microsoft Teams mean teams want to use the app – with less training and fewer barriers to adoption.
- » **Connected to the tools you already use:** Options to link up with Microsoft Planner, Project Online, SAP, Jira, Azure DevOps and other apps so your data stays current – and decisions are informed.
- » **Flexible and future-ready:** Microsoft's low-code/no-code tools enable you to expand the solution as you grow – no need to start over or wait extended time for developments.
- » **See how everything fits together:** View cross-project dependencies, timelines, resource utilisation and risks – enabling you to manage risks and delays before they escalate.
- » **Keep tasks and planning in sync:** Link task board with Gantt charts and ensure everyone's working to the same plan – while tracking progress.
- » **Know who's available, and when:** A central resource view shows you exactly who can take on work, so you can plan more effectively across teams.
- » **Data that works with you:** Your project data is secure on the Microsoft Power Platform, and securely ready to be imported, exported or shared with other apps when you need it.

GET STARTED QUICKLY AND EXPAND LATER

TPG ProjectPowerPack QuickStart Deployment

TPG QuickStart is a packaged, quick, cost-effective way to deploy TPG ProjectPowerPack for a fixed price. The approach includes workshop(s), implementation, and training. The result is a pre-configured solution with best-practice processes for project, portfolio, resource, and task management – all within your Microsoft 365 environment.

This scalable PPM solution can grow with your evolving requirements and the maturity level of your project management practices. This supports long-term user acceptance and protects your investment.

TPG ProjectPowerPack is deployed as a package in your Microsoft 365 tenant. Deployment is a few hours followed by minimal configuration. Requirements workshop and configuration updates includes:

- » Project types with associated methodologies
- » Categories for risks, issues, decisions, and change requests
- » Dropdown lists for project status
- » Organisational structure
- » Views and currencies
- » Währungen
- » Your corporate colours and logo

A role-based permissions model governs access to the features for different user groups including portfolio managers, project leads, and team members.

Need to connect to Azure DevOps, Jira, P6 or other scheduling tools? Speak to your TPG representative for more details.

THE LICENSES YOU NEED

In addition to TPG ProjectPowerPack licenses, the following Microsoft licenses are required:

- » **Power Apps** – Per App or Power Apps Premium
- » **Power BI Pro** – Access reports and dashboards (included in Microsoft 365 E5)
- » **Power Automate** – Service account to run all workflows
